_1	FUNCTION	SYS INCLUDE FILE	FUNCTION PROTOTYPE	DESCRIPTION
	abort abs	stdlib.h stdlib.h	<pre>void abort(void); int abs(int n);</pre>	Stops a program abnormally. Calculates the absolute value of an integer
2	abs	Stalib.li	incabs(incii);	argument n.
	acos	math.h	double acos(double x);	Calculates the arc cosine of x.
	asctime	time.h	char *asctime(const	Converts the <i>time</i> that is stored as a structure to
4	pastima #	time a la	struct tm *time);	a character string.
	asctime_r	time.h	char *asctime_r (const struct tm *tm, char	Converts <i>tm</i> that is stored as a structure to a character string. (Restartable version of asctime.)
5			*huf):	(Nestartable version or ascume.)
6	asin	math.h	double asin(double x);	Calculates the arc sine of x .
	assert	assert.h	void	Prints a diagnostic message and ends the program
7 8	atan	math.h	<pre>assert(int expression); double atan(double x);</pre>	if the expression is false. Calculates the arc tangent of x.
	atan2	math.h	double atan(double x);	Calculates the arc tangent of x . Calculates the arc tangent of y/x .
9	3 (3.12		double x);	carearates are tangent or 7/x:
	atexit	stdlib.h	int atexit(void	Registers a function to be called at normal
10	ataf	stdlib.h	(*func)(void)); double atof(const char	termination. Converts string to a double-precision floating-
11	atof	Stalib.II	*strina);	point value.
	atoi	stdlib.h	int atoi(const char	Converts <i>string</i> to an integer.
12			*strina):	
	atol	stdlib.h	long int atol(const char	Converts string to a long integer.
13	haaawah	stdlib.h	*string); void *bsearch(const void	Douforms a hinamy sounds on an array
	bsearch	Stalib.II	*key, const void *base,	Performs a binary search on an array of <i>num</i> elements, each of <i>size</i> bytes. The array
			size_t num, size_t size,	must be sorted in ascending order by the function
			int (*compare) (const	pointed to by compare.
			void *element1 , const	,
			<pre>void *element2));</pre>	
14	btowc	stdio.h	wint_t btowc(int c);	Determines whether c constitues a valid multibyte
16	Dtowc	wchar.h	wint_t blowc(int c),	character in the initial shift state.
	calloc	stdlib.h	void *calloc(size_t num,	Reserves storage space for an array
			size_t size);	of <i>num</i> elements, each of size <i>size</i> , and initializes
17		-1 to	:	the values of all elements to 0.
18	catclose	nl_types.h	<pre>int catclose (nl_catd catd):</pre>	Closes a previously opened message catalog.
	catgets	nl_types.h	char *catgets(nl_catd	Retrieves a message from an open message
		71	catd, int set_id, int	catalog.
19			msg id. const char *s):	
20	catopen	nl_types.h	nl_catd catopen (const	Opens a message catalog, which must be done
20	ceil	math.h	char *name, int oflag); double ceil(double x);	before a message can be retrieved. Calculates the double value representing the
	CCII		double cell(double x);	smallest integer that is greater than or equal to x .
21				
22	clearerr	stdio.h	void clearerr(FILE	Resets the error indicators and the end-of-file
22	clock	time.h	*stream); clock t clock(void);	indicator for stream. Returns the processor time that has elapsed since
23	CIOCK	ciiiic.iii	clock_t clock(vold),	the iob was started.
24	cos	math.h	double $cos(double x);$	Calculates the cosine of x.
25	cosh	math.h	double cosh(double x);	Calculates the hyperbolic cosine of x .
20	ctime	time.h	char *ctime(const time_t	Converts <i>time</i> to a character string.
26	ctime64	time.h	*time);	Converts time to a character string
27	Cumeo4	tille.ii	time64 t *time);	Converts time to a character string.
	ctime_r	time.h	char *ctime_r(const	Converts time to a character string. (Restartable
			time_t *time, char *buf);	
28	ctimo 6.4 r	timo h	char *ctime(/ v/cov-t	Converte time to a character string (Bests:t-1-1-
	ctime64_r	time.h	char *ctime64_r(const time64_t *time, char	Converts <i>time</i> to a character string. (Restartable version of ctime64.)
29			*buf):	version of culticor.)
	difftime	time.h	double	Computes the difference
			difftime(time_t time2,	between time2 and time1.
20		time.h	time t time1):	Computes the difference
30		itime.n	double	Computes the difference
30	difftime64			between timez and time1.
	difftime64		difftime64(time64_t time 2 time64 t time1):	
30	difftime64 div	stdlib.h	2 . time64 t time1): div_t div(int numerator ,	Calculates the quotient and remainder of the
31		stdlib.h	2. time64 t time1):	Calculates the quotient and remainder of the division of <i>numerator</i> by <i>denominator</i> .
31	div		2. time64 t time1 : div_t div(int numerator, int denominator);	division of <i>numerator</i> by <i>denominator</i> .
31	div	math.h	<pre>2. time64 t time1): div_t div(int numerator, int denominator); double erf(double x);</pre>	division of <i>numerator</i> by <i>denominator</i> . Calculates the error function of <i>x</i> .
31	div		2. time64 t time1 : div_t div(int numerator, int denominator);	division of <i>numerator</i> by <i>denominator</i> .
31 32 33	div	math.h	<pre>2. time64 t time1): div_t div(int numerator, int denominator); double erf(double x);</pre>	division of <i>numerator</i> by <i>denominator</i> . Calculates the error function of <i>x</i> . Calculates the error function for large values of <i>x</i> . Ends a program normally.
31 32 33 34 35	div erf erfc	math.h math.h	2. time64 \ t time1 \); div_t div(int numerator, int denominator); double erf(double x); double erfc(double x);	division of numerator by denominator. Calculates the error function of x. Calculates the error function for large values of x. Ends a program normally. Calculates the exponential function of a floating-
31 32 33 34	erf erfc exit exp	math.h math.h stdlib.h math.h	2 time64 t time1): div_t div(int numerator, int denominator); double erf(double x); double erfc(double x); void exit(int status); double exp(double x);	division of numerator by denominator. Calculates the error function of x. Calculates the error function for large values of x. Ends a program normally. Calculates the exponential function of a floating-point argument x.
31 32 33 34 35	div erf erfc exit	math.h math.h stdlib.h	2. time64 \ t time1 \); div_t div(int numerator, int denominator); double erf(double x); double erfc(double x); void exit(int status);	division of numerator by denominator. Calculates the error function of x. Calculates the error function for large values of x. Ends a program normally. Calculates the exponential function of a floating-point argument x. Calculates the absolute value of a floating-point
31 32 33 34 35	erf erfc exit exp	math.h math.h stdlib.h math.h	2. time64 t time1): div_t div(int numerator, int denominator); double erf(double x); double erfc(double x); void exit(int status); double exp(double x); double fabs(double x);	division of numerator by denominator. Calculates the error function of x. Calculates the error function for large values of x. Ends a program normally. Calculates the exponential function of a floating-point argument x.
31 32 33 34 35	erf erfc exit exp	math.h math.h stdlib.h math.h math.h	2 time64 t time1): div_t div(int numerator, int denominator); double erf(double x); double erfc(double x); void exit(int status); double exp(double x); double fabs(double x); int fclose(FILE *stream);	division of numerator by denominator. Calculates the error function of x. Calculates the error function for large values of x. Ends a program normally. Calculates the exponential function of a floating-point argument x. Calculates the absolute value of a floating-point argument x. Closes the specified stream.
31 32 33 34 35 36 37	erf erfc exit exp	math.h math.h stdlib.h math.h	2. time64 t time1): div_t div(int numerator, int denominator); double erf(double x); double erfc(double x); void exit(int status); double exp(double x); double fabs(double x);	division of numerator by denominator. Calculates the error function of x. Calculates the error function for large values of x. Ends a program normally. Calculates the exponential function of a floating-point argument x. Calculates the absolute value of a floating-point argument x.

	feof	stdio.h	<pre>int feof(FILE *stream);</pre>	Tests whether the end-of-file flag is set for a
40			,	given <i>stream</i> .
41	ferror	stdio.h	<pre>int ferror(FILE *stream);</pre>	Tests for an error indicator in reading from or writing to stream.
	fflush ₁	stdio.h	<pre>int fflush(FILE *stream);</pre>	Writes the contents of the buffer associated with
42	fgetc1	stdio.h	<pre>int fgetc(FILE *stream);</pre>	the output <i>stream</i> . Reads a single unsigned character from the
43	fgetpos1	stdio.h	int fgetpos(FILE	Input stream . Stores the current position of the file pointer
44	.gotpoo1		*stream , fpos_t *pos);	associated with <i>stream</i> into the object pointed to
45	fgets ₁	stdio.h	<pre>char *fgets(char *string , int n , FILE *stream);</pre>	Reads a string from the input <i>stream</i> .
	fgetwc6	stdio.h	wint_t fgetwc(FILE	Reads the next multibyte character from the input
47	-	wchar.h	*stream);	stream pointed to by stream.
48 49	fgetws ₆	stdio.h		Reads wide characters from the stream into the
	fileno5	wchar.h stdio.h	*wcs , int n , FILE int fileno(FILE *stream);	array pointed to by <i>wcs</i> . Determines the file handle currently associated
50	floor	month h	double floor(double x);	with stream. Calculates the floating-point value representing
51	floor	math.h	double floor(double x);	the largest integer less than or equal to x.
	fmod	math.h	double fmod(double x,	Calculates the floating-point remainder of x/y .
52	6	stdio.h	double v);	Opens the specified file.
53	fopen	Stalo.ii	FILE *fopen(const char *filename, const char *mode):	Opens the specified file.
- 55	fprintf	stdio.h	int fprintf(FILE *stream ,	Formats and prints characters and values to the
			const char *format-	output stream.
54			string , arg-list);	
55	fputc ₁	stdio.h	<pre>int fputc(int c , FILE *stream);</pre>	Prints a character to the output stream.
	fputs ₁	stdio.h	<pre>int fputs(const char *string , FILE *stream);</pre>	Copies a string to the output stream.
56				
	fputwc ₆	stdio.h	_wint_t	Converts the wide character wc to a multibyte
58 59	fputws ₆	wchar.h stdio.h	<pre>fputwc(wchar t wc, int fputws(const wchar_t</pre>	character and writes it to the output stream Converts the wide-character string wcs to a
60	TPUCVV30	wchar.h	*wcs , FILE *stream);	multibyte-character string and writes it
	fread	stdio.h	size_t fread(void	Reads up to <i>count</i> items of <i>size</i> length from the
			*buffer, size_t size, size t count, FILE	input <i>stream</i> , and stores them in <i>buffer</i> .
61			*stream):	
	free	stdlib.h stdio.h	void free(void *ptr);	Frees a block of storage. Closes stream, and reassigns it to the file
63	freopen	Staro.n	FILE *freopen(const char *filename, const char *mode, FILE *stream);	specified.
	frexp	math.h	double frexp(double x,	Separates a floating-point number into its
64	fscanf	stdio.h	<pre>int *expptr); int fscanf(FILE *stream,</pre>	mantissa and exponent. Reads data from <i>stream</i> into locations given
C.F.	iscaiii	Stulo.ii	const char *format- string , arg-list);	by arg-list.
65	fseek1	stdio.h	int fseek(FILE *stream,	Changes the current file position associated
66	13ccR1	Scarom	long int offset, int origin):	with <i>stream</i> to a new location.
	fsetpos1	stdio.h	int fsetpos(FILE	Moves the current file position to a new location
67			*stream, const fpos_t *nos):	determined by <i>pos</i> .
68	ftell ₁	stdio.h	long int ftell(FILE *stream):	Gets the current position of the file pointer.
	fwide ₆	stdio.h	int fwide(FILE *stream,	Determines the orientation of the stream pointed
70	fwnrintfc	wchar.h stdio.h	int mode); int	to by stream. Writes output to the stream pointed to by stream.
72	fwprintf6	wchar.h	fwprintf(FILE *stream .	writes output to the stream pointed to by stream.
	fwrite	stdio.h	size_t fwrite(const void	Writes up to count items of size length
			*buffer, size_t size,size_t count,	from <i>buffer</i> to <i>stream</i> .
73			FILF *stream):	
	fwscanf ₆	stdio.h	int	Reads input from the stream pointed to
75	gamma	wchar.h math.h	fwscanf(FILE *stream, double	by stream. Computes the Gamma Function
76	34		gamma(double x);	·
77	getc1	stdio.h	<pre>int getc(FILE *stream);</pre>	Reads a single character from the input stream.
	getchar1	stdio.h	int getchar(void);	Reads a single character from stdin.
	getenv	stdlib.h	char *getenv(const char	Searches environment variables for <i>varname</i> .
79	gots	stdio h	*varname); char *gets(char	Reads a string from <i>stdin</i> , and stores it in <i>buffer</i> .
80	gets	stdio.h	*buffer);	
81	getwc ₆	stdio.h	_wint_t	Reads the next multibyte character from stream,
82		wchar.h	<pre>getwc(FILE *stream);</pre>	converts it to a wide character and advances the

02	getwchar6	wchar.h	wint_t getwchar(void);	Reads the next multibyte character from stdin, converts it to a wide character, and advances the
83	anati	time a b	abused the Verstiller (associated file position indicator for stdin.
84	gmtime	time.h	struct tm *gmtime(const time_t *time);	Converts a <i>time</i> value to a structure of type tm.
85	gmtime64	time.h	struct tm *gmtime64(const time64 t *time):	Converts a <i>time</i> value to a structure of type tm.
83	gmtime_r	time.h	struct tm *gmtime_r (const time_t *time,	Converts a <i>time</i> value to a structure of type tm. (Restartable version of gmtime.)
86			struct tm *result):	(,
	gmtime64_ r	time.h	struct tm *gmtime64_r (const time64_t *time,	Converts a <i>time</i> value to a structure of type tm. (Restartable version of gmtime64.)
87	hypot	math.h	struct tm *result): double hypot(double side1,	Calculates the hypotenuse of a right-angled triangle with sides of length side1 and side2.
88			double side2):	
	isalnum	ctype.h	int isalnum(int c);	Tests if c is alphanumeric.
	isalpha	ctype.h	int isalpha(int c);	Tests if c is alphabetic.
	isascii4	ctype.h	int isascii(int c);	Tests if c is within the 7-bit US-ASCII range.
	isblank	ctype.h	int isblank(int c);	Tests if c is a blank or tab character.
	iscntrl	ctype.h	<pre>int iscntrl(int c);</pre>	Tests if c is a control character.
94	isdigit	ctype.h	<pre>int isdigit(int c);</pre>	Tests if c is a decimal digit.
95	isgraph	ctype.h	int isgraph(int c);	Tests if c is a printable character excluding the space.
96	islower	ctype.h	int islower(int c);	Tests if c is a lowercase letter.
c-	isprint	ctype.h	int isprint(int c);	Tests if c is a printable character including the
97				space.
	ispunct	ctype.h	int ispunct(int c);	Tests if c is a punctuation character.
	isspace	ctype.h	<pre>int isspace(int c);</pre>	Tests if c is a whitespace character.
100	isupper	ctype.h	int isupper(int c);	Tests if c is an uppercase letter.
101	iswalnum4	wctype.h	int iswalnum (wint_t wc);	Checks for any alphabatic wide character.
102	iswalpha4 iswblank4	wctype.h wctype.h	<pre>int iswalpha (wint_t wc); int iswblank (wint_t wc);</pre>	Checks for any alphabetic wide character. Checks for any blank or tab wide character.
103	iswcntrl4	wctype.h	int iswcntrl (wint_t wc);	Tests for any control wide character.
104	iswctype4	wctype.h	int iswctype(wint_t wc,	Determines whether or not the wide character wc
105	**	7.	wctype t wc prop);	has the property wc prop.
106	iswdigit4	wctype.h	<pre>int iswdigit (wint_t wc);</pre>	Checks for any decimal-digit wide character.
107	iswgraph4	wctype.h	int iswgraph (wint_t wc);	Checks for any printing wide character except for the wide-character space.
108	iswlower4	wctype.h	int iswlower (wint_t wc);	Checks for any lowercase wide character. Checks for any printing wide character.
109	iswprint4	wctype.h wctype.h	<pre>int iswprint (wint_t wc); int iswprinct (wint_t wc):</pre>	Test for a wide non-alphanumeric, non-space
110	iswspace4	wctype.h	int iswspace (wint_t wc);	character. Checks for any wide character that corresponds to
111	·		, , – ,,	an implementation-defined set of wide characters for which iswalnum is false.
112	iswupper4	wctype.h		Checks for any uppercase wide character. Checks for any hexadecimal digit character.
113	iswxdigit4 isxdigit4	wctype.h	int iswaigit (wint_t wc),	Tests if c is a hexadecimal digit.
	j0	math.h	double j0(double x);	Calculates the Bessel function value of the first kind of order 0.
	j1	math.h	double j1(double x);	Calculates the Bessel function value of the first kind of order 1.
117	jn	math.h	<pre>double jn(int n, double x);</pre>	Calculates the Bessel function value of the first kind of order n .
118	labs	stdlib.h	long int labs(long int n);	Calculates the absolute value of <i>n</i> .
119	Idexp	math.h stdlib.h	double Idexp(double x, int exp): Idiv t Idiv(long	Returns the value of x multiplied by (2 to the power of exp). Calculates the quotient and remainder
120	iuiv	istaliu.ii	int numerator, long	of numerator/denominator.
	localeconv	locale.h	struct Iconv	Formats numeric quantities in struct Iconv
121			*localeconv(void);	according to the current locale.
	localtime	time.h	struct tm *localtime(const time_t	Converts timeval to a structure of type tm.
122			*timeval):	
	localtime64	time.h	struct tm *localtime64(const	Converts timeval to a structure of type tm.
123	1100	ki aa a la	time64 t *timeval):	Converte a time and a law to the control of the con
124	localtime_r	time.h	struct tm *localtime_r (const time_t *timeval,	Converts a $time$ value to a structure of type tm . (Restartable version of localtime.)
124	localtime_r	time.h		

	localtime64	timo h	struct tm *localtime64_r	Converts a <i>time</i> value to a structure of type <i>tm</i> .
	_r	unie.n	(const time64_t *timeval, struct tm	(Restartable version of localtime64.)
125	1		*result):	Calandahaa tha matumal la annithan af u
126	log10	math.h math.h	<pre>double log(double x); double log10(double x);</pre>	Calculates the natural logarithm of x. Calculates the base 10 logarithm of x.
127	10910	macii.ii	double logio(double x),	Calculates the base to logarithm of x.
128	longjmp	setjmp.h	void longjmp(jmp_buf env, int value):	Restores a stack environment previously set in <i>env</i> by the setjmp function.
129	malloc	stdlib.h	void *malloc(size t size);	Reserves a block of storage.
130	mblen	stdlib.h	int mblen(const char *string, size t n):	Determines the length of a multibyte character string.
131	mbrlen4	wchar.h	<pre>int mbrlen (const char *s, size_t n, mbstate_t *ps):</pre>	Determines the length of a multibyte character. (Restartable version of mblen.)
132	mbrtowc4	wchar.h	<pre>int mbrtowc (wchar_t *pwc, const char *s, size_t n, mbstate_t *ps);</pre>	Convert a multibyte character to a wide character (Restartable version of mbtowc.)
133	mbsinit4	wchar.h	<pre>int mbsinit (const mbstate t *ps);</pre>	Test state object *ps for initial state.
	mbsrtowcs4	wchar.h	size_t mbsrtowc	Convert multibyte string to a wide character string. (Restartable version of mbstowcs.)
134	mbstowcs	stdlib.h	mbstate t *ns): size_t mbstowcs(wchar_t *pwc, const char *string, size_t n);	Converts the multibyte characters in <i>string</i> to their corresponding wchar_t codes, and stores not more than n codes in pwc .
135	mbtowc	stdlib.h	int mbtowc(wchar_t *pwc, const char	Stores the wchar_t code corresponding to the first <i>n</i> bytes of multibyte character <i>string</i> into the
130	memchr	string.h	*string , size t n): void *memchr(const void *buf , int c ,	wchar t character pwc. Searches the first count bytes of buf for the first occurrence of c converted to an unsigned
137	memcmp	string.h	size t count): int memcmp(const void	character. Compares up to count bytes of buf1 and buf2.
138			*buf1, const void *buf2, size t count):	
139	memcpy	string.h	<pre>void *memcpy(void *dest, const void *src, size t count):</pre>	Copies count bytes of src to dest.
140	memmove	string.h	<pre>void *memmove(void *dest, const void *src, size t count):</pre>	Copies <i>count</i> bytes of <i>src</i> to <i>dest</i> . Allows copying between objects that overlap.
141	memset	string.h	void *memset(void *dest, int c, size t count):	Sets count bytes of dest to a value c.
142	mktime	time.h	time_t mktime(struct tm *time);	Converts local <i>time</i> into calendar time.
143	mktime64	time.h	time64_t mktime64(struct tm *time):	Converts local <i>time</i> into calendar time.
144	modf	math.h	double modf(double x,	Breaks down the floating-point value x into
	nextafter	math.h	double nextafter(double x,	Calculates the next representable value after \boldsymbol{x} in the direction of \boldsymbol{y} .
145	nextafterl	math.h	double v): long double nextafterl(long double x, long double y);	Calculates the next representable value after \boldsymbol{x} in the direction of \boldsymbol{y} .
146	nexttoward	math.h	double nexttoward(double x,	Calculates the next representable value after x in the direction of y .
147	nexttowardl	math.h	long double v): long double nexttowardl(long	Calculates the next representable value after x in the direction of y .
148	nl_langinfo	langinfo.h	double x , long double v): char *nl langinfo(nl item ite	Retrieve from the current locale the string that describes the requested information specified
149	perror	stdio.h	*nl_langinfo(nl_item ite m): void perror(const char	hy item. Prints an error message to stderr.
150	pow	math.h	*string): double pow(double x,	Calculates the value x to the power y .
151	printf	stdio.h	double v); int printf(const char	Formats and prints characters and values to
152	putc ₁	stdio.h	*format-string , arg-list); int putc(int c , FILE	Prints c to the output stream.
153 154	putchar1	stdio.h	*stream); int putchar(int c);	Prints c to stdout.
254	putenv	stdlib.h	int *putenv(const char	Sets the value of an environment variable by
155	-		*varname);	altering an existing variable or creating a new one.

	puts	stdio.h	int puts(const char	Prints a string to stdout.
156		atdia b	*string);	
157 158	putwc ₆	stdio.h wchar.h	wint_t putwchar(wchar t wc,	Converts the wide character wc to a multibyte character, and writes it to the stream at the
	putwchar6	wchar.h	wint_t	Converts the wide character we to a multibyte
159			putwchar(wchar t wc):	character and writes it to stdout.
	qsort	stdlib.h	<pre>void qsort(void *base, size_t num,</pre>	Performs a quick sort of an array of <i>num</i> elements, each of <i>width</i> bytes in size.
			size_t width,	of Halli elements, each of whatir bytes in size.
			int(*compare)(const	
160			void *element1 , const

		Т		T
184	setlocale	locale.h	char *setlocale(int category, const char *locale):	Changes or queries variables defined in the <i>locale</i> .
	setvbuf	stdio.h	int setvbuf(FILE *stream , char *buf ,	Controls buffering and buffer size for stream .
185	signal	signal.h	<pre>int tvne. size t size); void(*signal (int sig, void(*func)(int))) (int);</pre>	Registers func as a signal handler for the signal sig.
187	sin	math.h	double sin(double x);	Calculates the sine of x.
188	sinh	math.h	double sinh(double x);	Calculates the hyperbolic sine of x.
189	snprintf	stdio.h	<pre>int snprintf(char *outbuf, size_t n, const char*,)</pre>	Same as sprintf except that the function will stop after n characters have been written to outbuf.
	sprintf	stdio.h	int sprintf(char *buffer, const char *format-	Formats and stores characters and values in <i>buffer</i> .
190	sgrt	math.h	<pre>string . arg-list): double sqrt(double x);</pre>	Calculates the square root of x.
151	srand	stdlib.h	void srand(unsigned	Sets the <i>seed</i> for the pseudo-random number
192	sscanf	stdio.h	int seed); int sscanf(const char	generator. Reads data from <i>buffer</i> into the locations given
193			*buffer, const char *format.ara-list):	by arg-list.
194	strcasecmp	strings.h	<pre>int srtcasecmp(const char *string1, const char *string2):</pre>	Compares strings without case sensitivity.
195	strcat	string.h	char *strcat(char *string1 , const char *string2):	Concatenates string2 to string1.
196	strchr	string.h	char *strchr(const char *string, int c);	Locates the first occurrence of c in $string$.
	strcmp	string.h	int strcmp(const char *string1, const char	Compares the value of string1 to string2.
197	strcoll	string.h	*strina2): int strcoll(const char *string1, const char	Compares two strings using the collating sequence in the current locale.
198	strcpy	string.h	*strina2): char *strcpy(char *string1 , const char	Copies string2 into string1.
199	strcspn	string.h	*string1 const char	Returns the length of the initial substring
200	strerror	string.h	*string1 , const char *string2): char	of <i>string1</i> consisting of characters not contained in <i>string2</i> . Maps the error number in <i>errnum</i> to an error
201	strfmon4	wchar.h	*strerror(int errnum): int strfmon (char *s,	message string. Converts monetary value to string.
202	strftime	time.h	size_t maxsize, const char *format,): size_t strftime (char	Stores characters in an array pointed to by <i>dest</i> ,
203	Strume	cinc.ii	*dest, size_t maxsize, const char *format, const struct tm	according to the string determined by format.
204	strlen	string.h	*timentr): size_t strlen(const char *strina);	Calculates the length of string.
	strncasecm p	strings.h	int strncasecmp(const char *string1, const char *string2, size_t count);	Compares strings without case sensitivity.
205	strncat	string.h	char *strncat(char	Concatenates up to <i>count</i> characters
206			*string1 , const char *string2 , size_t count);	of string2 to string1.
206	strncmp	string.h	<pre>int strncmp(const char *string1, const char *string2, size_t count);</pre>	Compares up to count characters of string1 and string2.
207	strncpy	string.h	char *strncpy(char *string1 , const char	Copies up to count characters of string2 to string1.
208	atom bul		*string2 , size_t count);	Landa Ma Guita a sugar de la Carta de la C
209	strpbrk	string.h	<pre>char *strpbrk(const char *string1 , const char *strina2):</pre>	Locates the first occurrence in <i>string1</i> of any character in <i>string2</i> .
	strptime4	time.h	char *strptime (const char *buf, const char *format, struct tm *tm);	Date and time conversion
210	strrchr	string.h	char *strrchr(const char	Locates the last occurrence of c in $string$.
211	strspn	string.h	*strina , int c): size_t strspn(const char *string1 , const char	Returns the length of the initial substring of string1 consisting of characters contained
212	strstr	string.h	*string2): char *strstr(const char *string1, const char *string2):	in strina2. Returns a pointer to the first occurrence of string2 in string1.
213			*strina2):	

214	strtod	stdlib.h	<pre>double strtod(const char *nptr, char **endptr);</pre>	Converts <i>nptr</i> to a double precision value.
215	strtod32	stdlib.h	_Decimal32 strtod32(const char *nptr. char **endptr):	Converts <i>nptr</i> to a single-precision decimal floating-point value.
216	strtod64	stdlib.h	_Decimal64 strtod64(const char *notr.char **endotr);	Converts <i>nptr</i> to a double-precision decimal floating-point value.
217	strtod128	stdlib.h	Decimal128 strtod128(const char *nptr.char **endptr):	Converts <i>nptr</i> to a quad-precision decimal floating-point value.
218	strtof	stdlib.h	<pre>float strtof(const char *nptr.char **endptr);</pre>	Converts <i>nptr</i> to a float value.
219	strtok	string.h	<pre>char *strtok(char *string1 , const char *string2):</pre>	Locates the next token in <i>string1</i> delimited by the next character in <i>string2</i> .
220	strtok_r	string.h	<pre>char *strtok_r(char *string, const char *seps.char **lasts):</pre>	Locates the next token in <i>string</i> delimited by the next character in <i>seps</i> . (Restartable version of strtok.)
	strtol	stdlib.h	long int strtol(const char *nptr, char **endptr,	Converts <i>nptr</i> to a signed long integer.
221	strtold	stdlib.h	int base): long double strtold(const char *nptr, char	Converts <i>nptr</i> to a long double value.
222	strtoul	stdlib.h	**endotr): unsigned long int strtoul(const char *string1, char **string2,	Converts string1 to an unsigned long integer.
	strxfrm	string.h	int hase): size_t strxfrm(char *string1, const char *string2, size_t count);	Converts <i>string2</i> and places the result in <i>string1</i> . The conversion is determined by the program's current locale.
224	swprintf	wchar.h	<pre>int swprintf(wchar_t *wcsbu ffer, size_t n, const wchar_t *format, arg- list):</pre>	Formats and stores a series of wide characters and values into the wide-character buffer wcsbuffer.
226	swscanf	wchar.h	int swscanf (const wchar_t *buffer, const wchar_t *format, arg- list)	Reads data from <i>buffer</i> into the locations given by <i>arg-list</i> .
	system	stdlib.h	int system(const char *string);	Passes <i>string</i> to the system command analyzer.
	tan	math.h	double tan(double x);	Calculates the tangent of x.
	tanh time	math.h time.h	<pre>double tanh(double x); time_t time(time_t *timeptr);</pre>	Calculates the hyperbolic tangent of x. Returns the current calendar time.
	time64	time.h	time64_t time64(time64_t *timeptr):	Returns the current calendar time.
	tmpfile	stdio.h	FILE *tmpfile(void);	Creates a temporary binary file and opens it.
	tmpnam	stdio.h	char *tmpnam(char *strina):	Generates a temporary file name.
234	toascii	ctype.h	int toascii(int c);	Converts c to a character in the 7-bit US-ASCII character set.
	tolower toupper	ctype.h ctype.h	<pre>int tolower(int c); int toupper(int c);</pre>	Converts c to Invercase.
	towctrans	wctype.h	wint_t towctrans(wint_t wc,	Converts c to uppercase. Translates the wide character wc based on the mapping described by desc.
237	towlower4	wctype.h	wctrans t desc): wint_t towlower (wint_t wc):	Converts uppercase letter to lowercase letter.
239	towupper4	wctype.h	wint_t towupper (wint_t wc);	Converts lowercase letter to uppercase letter.
240	ungetc1	stdio.h	int ungetc(int c, FILE *stream);	Pushes c back onto the input $stream$.
	ungetwc6	stdio.h	wint_t	Pushes the wide character wc back onto the input
242		wchar.h	ungetwc(wint t wc.	stream.
243	va_arg	stdarg.h	<pre>var_type va_arg(va_list arg_ptr, var_type);</pre>	Returns the value of one argument and modifies arg_ptr to point to the next argument.
244	va_copy	stdarg.h	t.va list src):	Initializes dest as a copy of src.
245	va_end	stdarg.h	void va_end (va_list arg_ ptr);	Facilitates normal return from variable argument list processing.
246	va_start	stdarg.h	void va_start (va_list arg _ptr, variable_name);	Initializes <i>arg_ptr</i> for subsequent use by <i>va_arg</i> and <i>va_end</i> .
247	vfprintf	stdio.h stdarg.h	<pre>int vfprintf(FILE *stream , const char *format , va_list arg_ntr):</pre>	Formats and prints characters to the output <i>stream</i> using a variable number of arguments.

	vfscanf	stdie h stdara h	int	Doods data from a specified stream into locations
248	VISCAIII	stdio.h stdarg.h	int vfscanf(FILE *stream, const char *format,	Reads data from a specified stream into locations given by a variable number of arguments.
	vfwprintf6	stdarg.h	va_list_arg_ntr): int	Equivalent to fwprintf, except that the variable
250	viwpillitio	stdio.h		argument list is replaced by <i>arg</i> .
251		wchar.h	_vfwprintf(FILE *stream , const	argument list is replaced by arg.
	vfwscanf	stdio.h stdarg.h	int vfwscanf(FILE *stream, const wchar_t *format, va_list	Reads wide data from a specified stream into locations given by a variable number of arguments.
252	vprintf	stdio.h stdarg.h	int vprintf(const char *format,	Formats and prints characters to stdout using a variable number of arguments.
253	vscanf	stdio.h stdarg.h	va_list_ara_ntr): int vscanf(const char *format, va_list	Reads data from stdin into locations given by a variable number of arguments.
254	vsprintf	stdio.h stdarg.h	arg_ntr): int vsprintf(char *target- string , const char *format ,	Formats and stores characters in a buffer using a variable number of arguments.
255	vsnprintf	stdio.h	int vsnprintf(char *outbuf, size_t n, const	Same as vsprintf except that the function will stop after n characters have been written to outbuf.
256 257	vsscanf	stdio.h stdarg.h	char*. va_list): int vsscanf(const char*buffer, const char *format, va_list arg_ntr):	Reads data from a buffer into locations given by a variable number of arguments.
	vswprintf	stdarg.h	int	Formats and stores a series of wide characters and
259		wchar.h	vswprintf(wchar t *wcsb	
260	vswscanf	stdio.h wchar.h	int vswscanf(const wchar_t *buffer, const wchar_t *format, va_list arg_ptr):	Reads wide data from a buffer into locations given by a variable number of arguments.
	vwprintf6	stdarg.h	int vwprintf(const	Equivalent to wprintf, except that the variable
262		wchar.h	wchar t *format.va list	argument list is replaced by arg.
263	vwscanf	stdio.h wchar.h	<pre>int vwscanf(const wchar_t *format, va_list arg_ptr):</pre>	Reads wide data from stdin into locations given by a variable number of arguments.
264	wcrtomb4	wchar.h	<pre>int wcrtomb (char *s, wchar_t wchar, mbstate_t *pss);</pre>	Converts a wide character to a multibyte character. (Restartable version of wctomb.)
265	wcscat	wchar.h	<pre>wchar_t *wcscat(wchar_t *string 1, const</pre>	Appends a copy of the string pointed to by <i>string2</i> to the end of the string pointed to by <i>string1</i> .
266	wcschr	wchar.h	wchar_t *string2): wchar_t *wcschr(const wchar_t *string,	Searches the wide-character string pointed to by <i>string</i> for the occurrence of <i>character</i> .
	wcscmp	wchar.h	wchar t character): int wcscmp(const wchar_t *string1, const	Compares two wide-character strings, *string1 and *string2.
267	wcscoll4	wchar.h	wchar t *string2): int wcscoll (const wchar_t *wcs1, const	Compares two wide-character strings using the collating sequence in the current locale.
268			wchar t *wcs2):	
269	wcscpy	wchar.h	<pre>wchar_t *wcscpy(wchar_t *string 1, const</pre>	Copies the contents of *string2 (including the ending wchar_t null character) into *string1.
270	wcscspn	wchar.h	<pre>wchar t *strina2): size_t wcscspn(const wchar_t *string1, const wchar_t *string2);</pre>	Determines the number of wchar_t characters in the initial segment of the string pointed to by *string1 that do not appear in the string
271	wcsftime	wchar.h	size_t wcsftime(wchar_t *wdes t, size_t maxsize, const wchar_t *format, const struct tm *timeptr);	nainted to by *strina2 Converts the time and date specification in the timeptr structure into a wide-character string.
	wcslen	wchar.h	size_t wcslen(const	Computes the number of wide-characters in the
272	wcslocaleco	locale.h	wchar t *string); struct wcslconv	string pointed to by string. Formats numeric quantities in struct
273	nv wcsncat	wchar.h	*wcslocaleconv(void); wchar_t *wcsncat(wchar_t *strin g1, const wchar_t *string2,	wcslconv according to the current locale. Appends up to count wide characters from string2 to the end of string1, and appends a wchar_t null character to the result.
274	wcsncmp	wchar.h	size t count : int wcsncmp(const wchar_t *string1, const wchar_t *string2, size t count):	Compares up to <i>count</i> wide characters in <i>string1</i> to <i>string2</i> .

	1	I	T. I	To the state of the Least
	wcsncpy	wchar.h	wchar_t	Copies up to count wide characters
			1 / \ _	from string2 to string1.
			g1, const	
276			wchar_t *string2,	
	wcspbrk	wchar.h	wchar_t *wcspbrk(const	Locates the first occurrence in the string pointed
			wchar_t *string1, const	to by <i>string1</i> of any wide characters from the
277			wchar t *string2):	string pointed to by string2.
	wcsptime	wchar.h	wchar_t *wcsptime (Date and time conversion. Equivalent to
			const wchar_t *buf,	strptime(), except that it uses wide characters.
			const wchar_t *format,	
278			struct tm *tm):	
	wcsrchr	wchar.h	wchar_t *wcsrchr(const	Locates the last occurrence of <i>character</i> in the
279			wchar_t *string , wchar_t character):	string pointed to by <i>string</i> .
2/3	wcsrtombs4	wchar.h	size t wcsrtombs (char	Converts wide character string to multibyte string.
	WCSICOIIIDS4	Wellal III	*dst, const wchar_t	(Restartable version of westombs.)
			**src, size t len,	(Nestal table version of Westerniss)
280			mbstate t *ps):	
	wcsspn	wchar.h	size_t wcsspn(const	Computes the number of wide characters in the
			wchar_t *string1, const	initial segment of the string pointed to by string1,
			wchar_t *string2);	which consists entirely of wide characters from
				the string pointed to by string2.
281				
	wcsstr	wchar.h	wchar_t *wcsstr(const	Locates the first occurrence of wcs2 in wcs1.
282			wchar_t *wcs1, const wchar_t *wcs2):	
202	wcstod	wchar.h	double wcstod(const	Converts the initial portion of the wide-character
	,vestou	W.C.I.G.	wchar_t *nptr,	string pointed to by <i>nptr</i> to a double value.
283			wchar t **endptr):	ourning pointed to by ripti to a double value.
	wcstod32	wchar.h	_Decimal32	Converts the initial portion of the wide-character
			wcstod32(const	string pointed to by <i>nptr</i> to a single-precision
			wchar_t *nptr,	decimal floating-point value.
284			wchar t **endntr):	
	wcstod64	wchar.h	_Decimal64	Converts the initial portion of the wide-character
			wcstod64(const	string pointed to by <i>nptr</i> to a double-precision
205			wchar_t *nptr ,	decimal floating-point value.
285			wchar t **endntr):	C
	wcstod128	wchar.h	_Decimal128	Converts the initial portion of the wide-character
			wcstod128(const	string pointed to by <i>nptr</i> to a quad-precision
286			wchar_t *nptr, wchar_t **endntr):	decimal floating-point value.
200	wcstof	wchar.h	float wcstof(const	Converts the initial portion of the wide-character
	Westor	Weildilli	wchar_t *nptr,	string pointed to by <i>nptr</i> to a float value.
287			wchar t **endptr):	string pointed to by hipti to a mode variation
	wcstok	wchar.h	wchar_t	Breaks wcs1 into a sequence of tokens, each of
			*wcstok(wchar_t *wcs1,	which is delimited by a wide character from the
			const wchar_t *wcs2,	wide string pointed to by wcs2.
			wchar_t **ptr)	
288				
	wcstol	wchar.h	long int wcstol(const	Converts the initial portion of the wide-character
			wchar_t *nptr,	string pointed to by <i>nptr</i> to a long integer value.
289			wchar_t **endptr, int base):	
203	wcstold	wchar.h	long double	Converts the initial portion of the wide-character
	TTCSCOIG		wcstold(const	string pointed to by <i>nptr</i> to a long double value.
			wchar_t *nptr,	James to a long double value.
290	<u> </u>		wchar t **endptr):	
	wcstombs	stdlib.h	size_t wcstombs(char	Converts the wchar_t string into a multibyte
			*dest, const wchar_t	string dest.
291			*string. size t count):	
	wcstoul	wchar.h	unsigned long int	Converts the initial portion of the wide-character
			wcstoul(const	string pointed to by <i>nptr</i> to an unsigned long
			wchar_t *nptr,	integer value.
292			wchar_t **endptr,	
232	wcsxfrm4	wchar.h	int hase \cdots size_t wcsxfrm	Transforms a wide-character string to values
	**C3A111114	W.C.I.G.	(wchar_t *wcs1, const	which represent character collating weights and
			wchar_t *wcs2,	places the resulting wide-character string into an
293			size t n):	array
	wctob	stdarg.h	int wctob(wint_t wc);	Determines whether wc corresponds to a member
295		wchar.h		of the extended character set whose multibyte
	wctomb	stdlib.h	int wctomb(char *string,	Converts the wchar_t value of character into a
			wchar_t character);	multibyte <i>string</i> .
296				
	wctrans	wctype.h	wctrans_t wctrans(const	Constructs a value with type wctrans_t that
20-			char *property);	describes a mapping between wide characters
297	ah	ahar b	waterna to control of the control	Obtains bandle for share the property.
298	wctype4	wchar.h	wctype_t wctype (const	Obtains handle for character property
298	wcwidth	wchar.h	char *property): int wcswidth(const	classification. Determine the display width of a wide character
	VVCVVIULII	wellar.ii	wchar_t *pwcs,	string.
	l		size $t n$:	sumg.
299				

	wmemchr	wchar.h	wchar t	Locates the first occurrence of c in the
	Willemen	Wellanii	*wmemchr(const	initial <i>n</i> wide characters of the object pointed to
			wchar t *s, wchar t c,	by s.
300			size t n):	by 5.
	wmemcmp	wchar.h	int wmemcmp(const	Compares the first <i>n</i> wide characters of the object
			wchar_t *s1 , const	pointed to by s1 to the first n characters of the
			wchar_t *s2 , size_t n);	object pointed to by s2.
301				, .
	wmemcpy	wchar.h	wchar_t	Copies <i>n</i> wide characters from the object pointed
			*wmemcpy(wchar_t *s1,	to by s2 to the object pointed to by s1.
			const wchar_t *s2,	
302			size t n):	
	wmemmov	wchar.h	wchar_t	Copies <i>n</i> wide characters from the object pointed
	e			to by s2 to the object pointed to by s1.
			1, const wchar_t *s2,	
303			size t n)·	
	wmemset	wchar.h	wchar_t	Copies the value of <i>c</i> into each of the first <i>n</i> wide
			*wmemset(wchar_t *s,	characters of the object pointed to by s .
304			wchar t c. size t n):	
	wprintf6	wchar.h	int wprintf(const	Equivalent to fwprintf with the argument stdout
			wchar_t *format, arg-	interposed before the arguments to wprintf.
305			list):	
	wscanf ₆	wchar.h	int wscanf(const	Equivalent to fwscanf with the argument stdin
306			wchar_t *format, arg-	interposed before the arguments of wscanf.
306	0	math.h	<pre>list): double y0(double x);</pre>	Calculates the Bessel function value of the second
307	y0	IIIaui.ii	double yo(double x);	
307	y1	math.h	double y1(double x);	kind of order 0. Calculates the Bessel function value of the second
308	ут	illatii.ii	double y I (double x),	kind of order 1.
308	yn	math.h	double yn(int n,	Calculates the Bessel function value of the second
309	yıı	illatii.ii	double x);	kind of order n.
